User Interface Overview

Mobile Config Profiles

Introduction

Supervised Devices

- Allow for device restrictions & greater administrative control.
- Ideal for devices owned by an organization and assigned to users in a shared or 1:1 environment.
- Supervision Entity – Apple School Manager or Apple Business Manager

In iOS 9.3 or later, look for a message at the bottom of the Lock Screen saying “This [iPhone or iPad] is managed by your organization.”

You can also go to Settings > General > About and look for this line of text under the name of the device: “This [iPhone or iPad] is supervised. [Organization name] can monitor your internet traffic and locate this device.”

Mobile Config Profiles

- XML File containing one or more ‘payloads’ that define a device setting or restriction.
- Some Payloads are platform and OS version specific.
 - Not all payloads will be supported on all iOS versions.
 - Some payloads are cross platform (ie: macOS and iOS).
- Can be installed on iOS devices via Apple Configurator or MDM.
- Some payloads are only available on ‘supervised’ devices.
