Modern Apple Device Management

Lecture

Managing Apple Devices at Scale

- Mobile Device Management / Device Management Server is a requirement.
- Remote Management (over-the-air) of devices in near real-time.
- Many device restrictions and management features are ONLY available via the Apple MDM Framework.
- Modern Authentication using an Identity Provider (IdP) requires an MDM/DMS.
- An MDM must be tied to Apple School / Business Manager to allow for proper activation, management (Supervision), and application deployment.
- Required to secure employee-owned devices in BYOD (bring your own device) models.

MDM / DMS Solutions

Mosyle MDM Solution

mosyle fuse

Apple Unified Platform

Why Mosyle

- Straight-forward & streamlined UI = perfect for learning!
- 30 free long-term evaluation licenses = perfect for learning!
- Leading edge and focused solely on Apple devices = perfect for learning!
- Great technical support (even during their free evaluation period) = perfect for learning!

This course is not about a third-party software application...

This is the way.

Apple's MDM Framework

- Apple's built-in API for managing their platforms (hardware and software) including Apple Watch, Apple Vision Pro, and AppleTV in addition to Mac, iPhone, and iPad.
- All MDM/DMS solutions implement this API... some with a little 'special sauce' that makes them unique.
- Understanding the API - documented in Apple's online Platform Deployment Guide - ensures that you can move between MDM/DMS solutions = transferrable skills!

My goal:

To provide you with the understanding of managing Apple devices at scale so you can apply these skills to any MDM in any organization.

Technical Requirements

Practical Exercise

Knowledge Pre-Reqs

- Recommend a decent amount of experience *using* Apple devices including iPhone, iPad, Mac, and AppleTV.
- Apple Certified Support Professional (SUP-202X) and Apple Certified IT Professional (DEP-202X) are helpful, but not required.
- General understanding of common computing terms including Desktop PC Hardware, Networking, Security, and Server-Client concepts.
- Some experience with Microsoft Azure / Entra ID or Google Workspace identity providers is also a plus.

Technical Requirements

- Apple School Manager or Apple Business Manager Access.
- Mosyle Mobile Device Management — Free Trial Available.
- Mac capable of running macOS 26 Tahoe (preferably Apple Silicon).
- iOS device capable of running iOS 26 or iPadOS 26.
- Apple Configurator for both Mac and iPhone — free downloads from the App Store(s).
- Internet Access, Apple Account with App Store capabilities.
- *Recommended: Identity Provider like Google Workspace, Okta, or Microsoft Azure Entra ID.*
- *Optional: Apple Remote Desktop (for Mac).*
